

ACI SOCIAL CHAPTER PRESENTS:

KNOWING YOUR CONCRETE STRENGTH WITHOUT CYLINDERS OR BEAMS

About the Program

WaveLogix's Rebel brand of sensors improves upon the industry standard to measure concrete strength: Breaking multiple field-cured concrete samples. Destructive concrete strength testing has several drawbacks including inaccuracy, quality control issues, user variability, material waste and expense. The Rebel sensor system directly measures real-time, in-place concrete strength without requiring destructive concrete testing or maturing curve development. Rebel sensors also are not impacted by concrete mix design, meaning the mix can be changed during a project.

The Rebel brand of concrete strength sensors was named a 2021 American Society of Civil Engineers GameChanger. A companion scientific paper earned ASCE's 2022 Alfred Noble Prize.

SPEAKER:

Luna Lu

*Founder
WaveLogix Inc.*

MODERATOR:

Nathan Forrest, P.E., ENV SP
*Technical Director
California Nevada Cement Assoc.*
